| Team ID | 6ab4a8ea6603573ccfb46a7b |
| Project | Script-Controlled ACL – Restrict Record Access Based on Field Value |
| Team Leader | Keerthika D |
| Team Members | losana S, Hema Priya M, Gokul |
| Date | 15-10-2026 |

## 1. Purpose

Specify a ServiceNow record-level access-control setup for the Institution Details table using roles, a Branch data condition and an ACL script.

## 2. Scope

Create a test user, four custom roles, a custom table and fields, Read ACL, Create/Write/Delete ACLs, and perform impersonation-based verification. This is a learning lab and is not claimed to be production-ready.

## 3. System requirements

• ServiceNow instance with administrator access.
• Required permissions to create users, roles, tables and ACLs.
• Test records with ECE, EEE and CSE Branch values.
• Ability to impersonate test users and capture screenshots.

## 4. Access rules

| Operation | Required role | Additional rule |
|---|---|---|
| Read | bb1 | Data condition: Branch is EEE; use supplied script; administrator exception. |
| Create | bb2 | No data condition specified in the supplied lab. |
| Write | bb3 | No data condition specified in the supplied lab. |
| Delete | bb4 | No data condition specified in the supplied lab. |

## 5. Assumptions and notes

The supplied Read script returns true for administrators and users with bb1, and false for others. The separate Branch is EEE data condition must also be configured. Verify effective behavior in the ServiceNow instance.
