Project	Script-Controlled ACL – Restrict Record Access Based on Field Value
Team Leader	Keerthika D
Team Members	losana S, Hema Priya M, Gokul
Date	15-10-2026

Problem / need	Proposed feature	Expected fit
Users must not view records outside their permitted scope.	Read ACL with role bb1 and Branch is EEE data condition.	Restricts read visibility to the intended branch and role.
Administrators need full oversight.	Administrator exception in supplied script.	Admin can view all branches as specified.
Create, update and delete need separate controls.	Create requires bb2; Write requires bb3; Delete requires bb4.	Permissions can be granted progressively and tested.
Rules must be verified.	Impersonation and test-record checks.	Demonstrates allowed and denied behavior.
