Project	Script-Controlled ACL – Restrict Record Access Based on Field Value
Team Leader	Keerthika D
Team Members	losana S, Hema Priya M, Gokul
Date	15-10-2026

Purpose

Define the access-control problem from the perspective of users and administrators before selecting a solution.

ID	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A student or staff user who should see only permitted records.	View institution records relevant to my role and branch.	I may see records outside my permitted scope if access rules are incorrect.	Roles and branch conditions may not be configured together correctly.	Concerned about privacy and unauthorized access.
PS-2	An administrator managing institution records.	Allow permitted users to read, create, update and delete records.	Incomplete rules may expose data or block valid work.	Each operation requires suitable access rules and verification.	Concerned about security and reliability.

Selected Problem Statement

Institution records need reliable role-based and field-based access control so that only authorized users can perform permitted actions, while administrators retain full access.
