Project	Script-Controlled ACL – Restrict Record Access Based on Field Value
Team Leader	Keerthika D
Team Members	losana S, Hema Priya M, Gokul
Date	15-10-2026

The solution uses ServiceNow ACLs to control access to a custom Institution Details table.

Implementation steps

1. Create the Institution Details table and required fields.
2. Add records with ECE, EEE and CSE Branch values.
3. Set the Read ACL to require bb1 and configure the Data condition Branch is EEE.
4. Add the supplied script to allow administrators and users with bb1, and deny others.
5. Configure Create, Write and Delete ACLs requiring bb2, bb3 and bb4 respectively.
6. Impersonate suitable users and verify behavior.

Read ACL script from the supplied instructions

```
(function () {
if (gs.hasRole('admin')) { return true; }
if (gs.hasRole('bb1')) { return true; }
return false;
})();
```

Important: The separate Data condition “Branch is EEE” must also be configured. Verify the combined ACL behavior in the instance.
